

Ransomware Resilience

Ransomware attacks represent a significant danger

According to Forrester Research, the number of ransomware attacks on enterprises is up 500% over last year, costing businesses in excess of \$11.5 billion.

It's all in the numbers....

Over **72%** of businesses worldwide were affected by ransomware attacks. *

90% of attacked organizations were mid-sized enterprises, those with less than \$1B in revenue. **

Not including the payouts, the average cost of a ransomware attack rose to **\$5.13 million** in 2023. ***

The severity of ransomware claims reached a record high, with the average loss amount more than **\$365,000**. ****

Backup is Your Last Line of Defense

NetVault Plus protects both your production data and backups to help ensure fast recovery and improve ransomware resilience

CDP and instant restore

Reduce risk of data loss and business downtime.

Immutable backups

Prevent changes or deletions to your critical backup data during your retention period.

Anomaly Detection

Uses a machine learning algorithm to detect and alert any anomalous behaviour during backup and recovery

Object & Cloud locking

Secure backups stored in the cloud with immutability.

Air-gap backups

Backup to tape for air-gap protection.

Data encryption

Encrypt data, both in-flight and at rest.

Unpublished storage protocol

Data can't be browsed nor is it openly broadcast.

Backup replication

Replicate backups offsite and to the cloud for redundancy.

Multi-factor authentication

Protect your backup system from unauthorized access.

Deduplication

Reduce on-prem and cloud backup storage costs by up to 93%.
