On Demand Migration Active Directory Express

Quest

Migrate devices effortlessly

When planning an Active Directory or Entra ID migration or consolidation, you may need to quickly migrate devices into a single environment with minimal user impact.

On Demand Migration (ODM) for Active Directory (AD) Express helps you reach your device migration goals by automatically creating workflows for your project using a simple step-by-step setup wizard, with no complex configuration required.

Features

Supports AD and Entra ID migration scenarios

ODM for AD Express can migrate and consolidate objects between any combination of environments, including Active Directory, hybrid AD, and Entra ID directories.

Supports AD modernization scenarios

ODM for AD Express can convert existing hybrid AD-joined Windows 10 and Windows 11 devices to Entra-joined devices in the same environment to transition to a cloudonly environment.

Supports discovery and mapping files

Define the scope of your migration by providing discovery and mapping files during project setup. ODM for AD Express can match to existing users and groups, or create them in the target environment. During device migration, ODM for AD Express updates device permissions using these mappings.

Wizard-driven project setup

ODM for AD Express automatically configures your project using information you enter into a simple project setup wizard. ODM for AD Express walks you through installing AD agents in local environments, creating Entra ID connections for cloud environments, uploading discovery and mapping files, deploying device agents, and registering devices for migration.

Minimizes user disruption and risk

Complete your device migration on your own schedule, whether that's during normal business hours, or after hours. End users can keep working during the migration, with only a brief interruption to allow the computer to restart. ODM for AD Express updates the user profile as part of the migration to ensure that their desktop and applications will look exactly the same when users log back in, so they can continue working with minimal impact.

Intune compatible

ODM for AD Express can migrate devices that are enrolled in Intune as well as devices that were provisioned by Autopilot. ODM for AD Express manages the cleanup of device entries from the source tenant during the device migration process to prevent conflicts during target Intune enrollment, ensuring a successful migration.

Pre-configure device settings for Entra ID migrations

ODM for Active Directory builds upon the Microsoft bulk provisioning functionality to perform Entra ID device migrations. You can customize the provisioning package to configure advanced migration settings, including provisioning certificates, configuring wireless connections, and performing application installation and removal. ODM for AD Express lets you assign different provisioning packages to different groups of devices to meet your business needs.

About Quest

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Microsoft 365 migration and management, and cybersecurity resilience, Quest helps customers solve their next IT challenge now. Quest Software. Where next meets now.
